ERROR CODES

1. **502 - (Bad Gateway)** This error indicates if any file path isn't found

2. **403 - (Forbidden)** This error indicates that the user is not permitted to access that file location

3. **404 - (File not Found)** This error indicates that some file in database isn't opening in reading mode

4. **503 - (HTTP request not accepted / server is down or overloaded)** This error indicates that the software isn't able to connect with the local server. Do check the internet connections in this case.

5. **599 - (Unable to process this request)** This error indicates that the request was interrupted due network timeout due to some reason

6. **408 - (No reply from server)** This error indicates that there's some issue of connection with server.

7. **424 - (Runtime Error)** This error indicates that the file has some source code related issues

8. **444 - (No response)** This error indicates that due the automatic pause in the internet connection, the request wasn't processed properly

9. **417 - (Expectation Failed)** This error indicates that the software in your system is communicating through a proxy server instead of being directly connected to the internet
